Chapter 3 : Perpendicular and Parallel Lines

Slopes of Lines. The slope of a line is the ratio of its vertical rise to its horizontal run. The slope of a vertical line is undefined, and the slope of a horizontal line is zero. Two nonvertical lines have the same slope if and only if they are parallel.

Chapter 3: Parallel and Perpendicular Lines

Section 3.3 Notes: Slopes of Lines. The steepness or slope of a hill is described by the ratio of the hill's vertical rise to its horizontal run. In algebra, you learned that the slope of a line in the coordinate plane can be calculated using any two points on the line. Example 1: Find the slope of the given lines.
